Mechanized Wheat Production Training Manual

Abstract:

This manual provides some guidelines to good agricultural practices and the type of machinery available in increasing production and productivity in wheat production in Kenya and Tanzania. The targeted users of the manual are mainly medium and small-scale farmers engaged in wheat production, using hand, draught animal and tractor-based mechanization. The manual consid- ers sustainable and climate-smart mechanization options. Some of the machines described/ discussed are those under the Africa Agricentre of Excellence (AAE) project implemented by Kibaigwa Flour Supplies in Tanzania and Tinga in Kenya in partnership with the AAE private sector consortium comprised of Grimme, Poettinger and Bayer.
